Sustainability Policy

1. Overview

Delta Electricity is a major supplier of energy to the Australian national electricity market. Delta Electricity's core business is the base load generation of electricity.

Our primary objective is to operate facilities for efficient, safe and sustainable energy production, while maintaining a balance between the electricity demand from the community and industry for an affordable and reliable electricity supply, and the impact from the production of this electricity on the environment and the communities where it operates.

Sustainability involves balancing economic, environmental, social and corporate governance aspects of the business so as to meet the needs of today without compromising the needs of future generations.

This policy describes how Delta Electricity will meet its corporate responsibilities and obligations to continually improve its sustainability performance with consideration of its shareholders and employees, the community and the environment.

2. The Policy

Delta Electricity will maintain a focus on improving sustainability in all relevant decision making as well as effectively integrating economic and environmental considerations into its decision-making processes. It will exhibit social responsibility by having regard to providing affordable reliable energy to the community and minimising the environmental impacts associated with power production.

To achieve this, it will apply the following principles in its operations:

- maintain good corporate governance practices;
- provide a safe, secure and reliable energy supply;
- deliver value to shareholders, customers and the community;
- continue to engage with Federal and State Governments and Regulators regarding Australia's renewable energy policies and environmental objectives;

- ✓ maintain and increase, where possible, the renewable biomass co-firing program at Vales Point power station;
- ✓ support the development of emissions reductions at Vales Point through initiatives such as:
 - use of waste mine gas from the closed Newvale Colliery to prevent direct methane emissions;
 - the Post Combustion Capture research plant being operated under licence by the CSIRO at the Vales Point power station;
 - investigating battery storage solutions to improve system security and facilitate the increasing penetration of renewable technology; and
 - The Darlington Point Solar Farm 150MW_{AC} power purchase agreement (PPA), which provides a model for how both traditional generation and renewables can work together to ensure reliable supply to customers while providing a significant contribution to state and federal government renewable energy targets.
- ✓ continually seek new business opportunities in deploying renewables and energy firming technologies sector where it is economic to do so, including the underwriting of projects via Power Purchase Agreements;
- ✓ operate efficiently and, to this end;
 - reduce greenhouse emissions from our coal fired power generators where it is practicable and economic to do so;
 - minimise the consumption of fresh water; and
 - produce less waste and increase recycling and re-use;
 - Minimize wildfire impacts on Vales Point property through risk mitigation strategies, thus improving critical infrastructure resilience
- ✓ maintain and enhance workplace health, safety, wellbeing and professional development;
- ✓ engage with staff and external stakeholders on significant sustainability matters;
- ✓ conduct its operations in compliance with the principles of ecologically sustainable development, incorporating the precautionary principle, and will continually improve environmental performance;
- ✓ foster and support community programs; and
- ✓ measure and report its sustainability performance as required.
